

Project Brief

Q2 Apartments Floor Strengthening

Wellington, NZ
2010

Multiple layers of Tyfo® SEH 51A Fibrwrap® were utilized to strengthen the floors on levels 3-7 of QV House.

The Tyfo® SEH 51A Fibrwrap® system achieved the required strengthening without adding additional dead load to the structure or loss of usable space.

The Fibrwrap® was installed into rebated strips on the top of the floors, and covered over with FLC, completely hiding the installation.
